Chemistry and Physics of Lipids, 47 (1988)
Elsevier Scientific Publishers Ireland Ltd.

Subject Index

Volume 47

acid-catalyzed isomerization, X-ray crystallography, sterol, 283
acid catalyzed isomerization, X-ray crystallography, sterol, conformational analysis, 273
acyl migrations, hydroxy thiol esters, glycidol esters, mercaptoglycerol esters, 217
allyl benzyl *sn*-glycerol, 3,4-isopropylidene-D-mannitol, glyceryl esters, glyceryl ethers, glyceryl ether/ester, chemical synthesis, 47

calorimetry, glycolipids, galactolipids, X-ray scattering, electron microscopy, phase transitions, 245
chemical synthesis, 3,4-isopropylidene-D-mannitol, glyceryl esters, glyceryl ethers, glyceryl ether/ester, allyl benzyl *sn*-glycerol, 47
chemical synthesis, phospholipids, lysophospholipids, lysolecithins, lysocephalins, lysophosphatidyl glycerol, lysophosphatidyl serines, 63
chirality, polymerizable lipid, tubule formation, isomers, 135
chromiumtricarbonyl complex, synthesis, spectroscopic properties, 1,1-diphenyl-1-alkanols, 209
conformational analysis, X-ray crystallography, sterol, acid catalyzed isomerization, 273
cytochrome *c* oxidase, diphosphatidylglycerol, cytochrome *P*-450, stereospecific, phospholipase, 261
cytochrome *P*-450, diphosphatidylglycerol, cytochrome *c* oxidase, stereospecific, phospholipase, 261

demethylation, phosphatidylserine, phosphatidylcholine, phosphatidylethanolamine, phosphatidylglycerol, phosphate tri-ester, phosphate methyl ester, 55
diacylglycerols, hydroxyacylglycerols, oxoacylglycerols, glycidol esters, oxo-acid anhydrides, synthesis, HPLC analysis, 75
dielectric relaxation, dimyristoylphosphatidylcholine, gramicidin A, zwitterion relaxation, protein-lipid interaction, lipid phase transition, 299
diffusion, phospholipids, monolayer, fluorescence, mobility, 291
4,4-dimethyl-15-oxygenated sterols, sterol synthesis inhibitors, 3-hydroxy-3-methylglutaryl coenzyme A reductase activity, 187
dimyristoylphosphatidylcholine, dielectric relaxation, gramicidin A, zwitterion relaxation, protein-lipid interaction, lipid phase transition, 299
1,1-diphenyl-1-alkanols, synthesis, spectroscopic properties, chromiumtricarbonyl complex, 209
diphosphatidylglycerol, cytochrome *P*-450, cytochrome *c* oxidase, stereospecific, phospholipase, 261
dopamine, ion gradients, large unilamellar vesicles, 97

electron microscopy, glycolipids, galactolipids, calorimetry, X-ray scattering, phase transitions, 245
electron microscopy, phospholipids, swelling, morphology, L_α-phase, small-angle X-ray scattering, 225
electron spin resonance, *α*-tocopherol, vitamin E, phase separation, perdeutero di-*t*-butyl nitroxide, phospholipid liposomes, 129
ether lipids, *Staphylococcus aureus*, lipases, stereospecificity, 117

fatty acid methyl esters, transmethylation, reductive transmethylation, 149
fluorescence, phospholipids, monolayer, mobility, diffusion, 291
Fourier transformed infrared spectroscopy, phosphatidylethanolamine, hydrogen-bonds, freeze fracture electron microscopy, 109
freeze fracture electron microscopy, phosphatidylethanolamine, hydrogen-bonds, Fourier transformed infrared spectroscopy, 109

galactolipids, glycolipids, calorimetry, X-ray scattering, electron microscopy, phase transitions, 245
glyceryl esters, 3,4-isopropylidene-D-mannitol, glyceryl ethers, glyceryl ether/ester, allyl benzyl *sn*-glycerol, chemical synthesis, 47
glyceryl ether/ester, 3,4-isopropylidene-D-mannitol, glyceryl esters, glyceryl ethers, allyl benzyl *sn*-glycerol, chemical synthesis, 47
glyceryl ethers, 3,4-isopropylidene-D-mannitol, glyceryl esters, glyceryl ether/ester, allyl benzyl *sn*-glycerol, chemical synthesis, 47
glycidol esters, hydroxyacylglycerols, oxoacylglycerols, diacylglycerols, oxo-acid anhydrides, synthesis, HPLC analysis, 75
glycidol esters, hydroxy thiol esters, mercaptoglycerol esters, acyl migrations, 217
glycolipids, galactolipids, calorimetry, X-ray scattering, electron microscopy, phase transitions, 245
gramicidin A, dielectric relaxation, dimyristoylphosphatidylcholine, zwitterion relaxation, protein-lipid interaction, lipid phase transition, 299

HPLC analysis, hydroxyacylglycerols, oxoacylglycerols, glycidol esters, diacylglycerols, oxo-acid anhydrides, synthesis, 75
hydrated cerebrosides, hydrogen-bonding, theoretical models, 83
hydrogen-bonding, hydrated cerebrosides, theoretical models, 83
hydrogen-bonds, phosphatidylethanolamine, Fourier transformed infrared spectroscopy, freeze fracture electron microscopy, 109
3-hydroxy-3-methylglutaryl coenzyme A reductase activity, sterol synthesis inhibitors, 4,4-dimethyl-15-oxygenated sterols, 187
hydroxyacylglycerols, oxoacylglycerols, glycidol esters, diacylglycerols, oxo-acid anhydrides, synthesis, HPLC analysis, 75
hydroxy thiol esters, glycidol esters, mercaptoglycerol esters, acyl migrations, 217

interbilayer swelling, phosphatidylethanolamine, phosphatidic acid, lipid polymorphism, 123
ion gradients, dopamine, large unilamellar vesicles, 97
isomers, chirality, polymerizable lipid, tubule formation, 135
3,4-isopropylidene-D-mannitol, glyceryl esters, glyceryl ethers, glyceryl ether/ester, allyl benzyl *sn*-glycerol, chemical synthesis, 47

15-ketosterol, 15-oxygenated sterol, 177

L_α-phase, phospholipids, swelling, morphology, small-angle X-ray scattering, electron microscopy, 225
lanthanoide ions, phosphatidyl choline bilayer, unilamellar liposomes, ^{13}C-NMR relaxation, statistical mechanics, 69
large unilamellar vesicles, dopamine, ion gradients, 97
lipases, *Staphylococcus aureus*, ether lipids, stereospecificity, 117
lipid monolayers, polymyxin B_1, polymyxin B_1 nonapepitide, phosphatidic acid, phase transition, 155
lipid phase transition, dielectric relaxation, dimyristoylphosphatidylcholine, gramicidin A, zwitterion relaxation, protein-lipid interaction, 299
lipid polymorphism, phosphatidylethanolamine, phosphatidic acid, interbilayer swelling, 123
lysocephalins, phospholipids, lysophospholipids, lysolecithins, lysophosphatidyl glycerol, lysophosphatidyl serines, chemical synthesis, 63
lysolecithins, phospholipids, lysophospholipids, lysocephalins, lysophosphatidyl glycerol, lysophosphatidyl serines, chemical synthesis, 63
lysophosphatidyl glycerol, phospholipids, lysophospholipids, lysolecithins, lysocephalins, lysophosphatidyl serines, chemical synthesis, 63
lysophosphatidyl serines, phospholipids, lysophospholipids, lysolecithins, lysocephalins, lysophosphatidyl glycerol, chemical synthesis, 63
lysophospholipids, phospholipids, lysolecithins, lysocephalins, lysophosphatidyl glycerol, lysophosphatidyl serines, chemical synthesis, 63
marine invertebrate, phospholipid, sterol, phase transition, 165
mercaptoglycerol esters, hydroxy thiol esters, glycidol esters, acyl migrations, 217
metabolism of 15-ketosterol, 15-oxygenated sterol, 1
mobility, phospholipids, monolayer, fluorescence, diffusion, 291
monolayer, phospholipids, fluorescence, mobility, diffusion, 291
morphology, phospholipids, swelling, L_α-phase, small-angle X-ray scattering, electron microscopy, 225

^{13}C-NMR relaxation, phosphatidyl choline bilayer, unilamellar liposomes, lanthanoide ions, statistical mechanics, 69

oxo-acid anhydrides, hydroxyacylglycerols, oxoacylglycerols, glycidol esters, diacylglycerols, synthesis, HPLC analysis, 75
oxoacylglycerols, hydroxyacylglycerols, glycidol esters, diacylglycerols, oxo-acid anhydrides, synthesis, HPLC analysis, 75
15-oxygenated sterol, metabolism of 15-ketosterol, 1
15-oxygenated sterol, 15-ketosterol, 177
15-oxygenated sterol, sterol synthesis, 21

perdeutero di-*t*-butyl nitroxide, electron spin resonance, *α*-tocopherol, vitamin E, phase separation, phospholipid liposomes, 129
phase separation, electron spin resonance, *α*-tocopherol, vitamin E, perdeutero di-*t*-butyl nitroxide, phospholipid liposomes, 129
phase transition, phospholipid, sterol, marine invertebrate, 165
phase transition, polymyxin B_1, polymyxin B_1 nonapepitide, phosphatidic acid, lipid monolayers, 155
phase transitions, glycolipids, galactolipids, calorimetry, X-ray scattering, electron microscopy, 245
phosphate methyl ester, phosphatidylserine, phosphatidylcholine, phosphatidylethanolamine, phosphatidylglycerol, phosphate tri-ester, demethylation, 55
phosphate tri-ester, phosphatidylserine, phosphatidylcholine, phosphatidylethanolamine, phosphatidylglycerol, phosphate methyl ester, demethylation, 55
phosphatidic acid, phosphatidylethanolamine, lipid polymorphism, interbilayer swelling, 123
phosphatidic acid, polymyxin B_1, polymyxin B_1 nonapepitide, lipid monolayers, phase transition, 155
phosphatidylcholine, phosphatidylserine, phosphatidylethanolamine, phosphatidylglycerol, phosphate tri-ester, phosphate methyl ester, demethylation, 55
phosphatidylethanolamine, hydrogen-bonds, Fourier transformed infrared spectroscopy, freeze fracture electron microscopy, 109
phosphatidylethanolamine, phosphatidic acid, lipid polymorphism, interbilayer swelling, 123

phosphatidylethanolamine, phosphatidylserine, phosphatidylcholine, phosphatidylglycerol, phosphate tri-ester, phosphate methyl ester, demethylation, 55
phosphatidylglycerol, phosphatidylserine, phosphatidylcholine, phosphatidylethanolamine, phosphate tri-ester, phosphate methyl ester, demethylation, 55
phosphatidylserine, phosphatidylcholine, phosphatidylethanolamine, phosphatidylglycerol, phosphate tri-ester, phosphate methyl ester, demethylation, 55
phosphatidyl choline bilayer, unilamellar liposomes, ^{13}C-NMR relaxation, lanthanoide ions, statistical mechanics, 69
phospholipase, diphosphatidylglycerol, cytochrome *P*-450, cytochrome *c* oxidase, stereospecific, 261
phospholipid, sterol, phase transition, marine invertebrate, 165
phospholipids, lysophospholipids, lysolecithins, lysocephalins, lysophosphatidyl glycerol, lysophosphatidyl serines, chemical synthesis, 63
phospholipids, monolayer, fluorescence, mobility, diffusion, 291
phospholipids, swelling, morphology, L_α-phase, small-angle X-ray scattering, electron microscopy, 225
phospholipid liposomes, electron spin resonance, *α*-tocopherol, vitamin E, phase separation, perdeutero di-*t*-butyl nitroxide, 129
polymerizable lipid, chirality, tubule formation, isomers, 135
polymyxin B_1, polymyxin B_1 nonapepitide, phosphatidic acid, lipid monolayers, phase transition, 155
polymyxin B_1 nonapepitide, polymyxin B_1, phosphatidic acid, lipid monolayers, phase transition, 155
protein-lipid interaction, dielectric relaxation, dimyristoylphosphatidylcholine, gramicidin A, zwitterion relaxation, lipid phase transition, 299

reductive transmethylation, transmethylation, fatty acid methyl esters, 149

small-angle X-ray scattering, phospholipids, swelling, morphology, L_α-phase, electron microscopy, 225
spectroscopic properties, synthesis, 1,1-diphenyl-1-alkanols, chromiumtricarbonyl complex, 209
Staphylococcus aureus, lipases, ether lipids, stereospecificity, 117
statistical mechanics, phosphatidyl choline bilayer, unilamellar liposomes, ^{13}C-NMR relaxation, lanthanoide ions, 69
stereospecific, diphosphatidylglycerol, cytochrome *P*-450, cytochrome *c* oxidase, phospholipase, 261
stereospecificity, *Staphylococcus aureus,* lipases, ether lipids, 117
sterol, phospholipid, phase transition, marine invertebrate, 165
sterol, X-ray crystallography, acid-catalyzed isomerization, 283
sterol, X-ray crystallography, acid catalyzed isomerization, conformational analysis, 273
sterol synthesis, 15-oxygenated sterol, 21
sterol synthesis inhibitors, 4,4-dimethyl-15-oxygenated sterols, 3-hydroxy-3-methylglutaryl coenzyme A reductase activity, 187
swelling, phospholipids, morphology, L_α-phase, small-angle X-ray scattering, electron microscopy, 225
synthesis, hydroxyacylglycerols, oxoacylglycerols, glycidol esters, diacylglycerols, oxo-acid anhydrides, HPLC analysis, 75
synthesis, spectroscopic properties, 1,1-diphenyl-1-alkanols, chromiumtricarbonyl complex, 209

theoretical models, hydrated cerebrosides, hydrogen-bonding, 83
α-tocopherol, electron spin resonance, vitamin E, phase separation, perdeutero di-*t*-butyl nitroxide, phospholipid liposomes, 129
transmethylation, reductive transmethylation, fatty acid methyl esters, 149
tubule formation, chirality, polymerizable lipid, isomers, 135

unilamellar liposomes, phosphatidyl choline bilayer, ^{13}C-NMR relaxation, lanthanoide ions, statistical mechanics, 69

vitamin E, electron spin resonance, *α*-tocopherol, phase separation, perdeutero di-*t*-butyl nitroxide, phospholipid liposomes, 129

X-ray crystallography, acid-catalyzed isomerization, sterol, 283
X-ray crystallography, sterol, acid catalyzed isomerization, conformational analysis, 273
X-ray scattering, glycolipids, galactolipids, calorimetry, electron microscopy, phase transitions, 245

zwitterion relaxation, dielectric relaxation, dimyristoylphosphatidylcholine, gramicidin A, protein-lipid interaction, lipid phase transition, 299

Chemistry and Physics of Lipids, 47 (1988) 313
